

# How to Help a Teen Improve Executive Functions

Do you know a high schooler or college student who just can't get it together? Maybe they struggle to "reach potential," want to do well, but are overwhelmed by the demands of school and extracurricular activities. Maybe this teenager is your child or a student in your classroom, one who seems immature or a step behind peers. There is a good chance that this young person needs to improve their executive functioning skills. So, how do you talk to a teen or young adult about executive functions? How can you help them improve?

Many highly intelligent and capable teens and young adults struggle with executive functioning skills—things like planning, focus, organization, time management, and flexibility. These young people may have difficulties with prioritizing schoolwork, keeping track of time, staying organized, or working to the best of their ability. Recognizing struggles with executive functions can be a powerful first step towards improving academic performance and increasing a sense of self esteem. But helping these young people learn more about executive functions can be difficult because they are at an age where they are asserting their independence and often resist labels, advice, and instruction. If you can give them some tools to use where and when they choose, however, you may have more success.

The following list provides young people with a set of resources they can explore by themselves. These readings and videos will help them understand and improve executive

functions all on their own.

## **Executive Functions Bibliography for Teens and College Students**

***Welcome to Your Brain: Why You Lose Your Car Keys but Never Forget How to Drive and Other Puzzles of Everyday Life*** by Sandra Aamodt and Sam Wang (2008)

***Train Your Mind for Peak Performance: A Science-Based Approach for Achieving Your Goals*** Lyle Bourne & Alice Healy (2014)
