

# What Are Core Writing Skills?

Writing is an extremely complex task that is not only difficult to learn but also hard to teach. Frustration with written work is a hallmark of [alternative learners](#) and children who are diagnosed with [Attention Deficit/Hyperactivity Disorder](#) and [Dyslexia](#). Many children struggle to learn core writing skills. Developing the skills necessary to become a good writer requires the use of many executive functioning skills, repeated practice, and the willingness to learn from one's mistakes.

Children who struggle with writing typically have difficulty in one or more of the following four areas:

- Handwriting: The capacity to write legibly and efficiently.
- Writing fluency: The capacity to write quickly, efficiently, and completely.
- Written organization: The ability to organize one's written thoughts in a coherent and orderly fashion.
- Spelling: The capacity to spell words correctly.

Learn more about these crucial writing skills:

## Handwriting

## Writing Fluency

Fluency is described as the capacity to efficiently and quickly produce written material of a high quality. Individuals who struggle with writing fluency may have problems getting even a few words onto paper and often do not finish their written work. Because of this, their written work is typically shorter and of poorer quality than that of their peers.

A common underlying cause of difficulty with writing fluency is poor and slow handwriting skills; children need to put forth an inordinate amount of effort in order to write legibly, or they give up legibility for speed. Other reasons for difficulty in writing fluency include language learning disabilities, difficulty in translating verbal or oral ideas onto paper, a lack of instruction or strategy as to how to initiate and sustain written work, and a poverty of content and understanding about the area of interest.

## Written Organization

Written organization is described as the capacity to organize one's written thoughts in a systematic manner; this is the ability to communicate a beginning, middle, and end in a piece of writing. Written organization facilitates the capacity to convey one's thoughts in writing. It is a skill that builds upon expressive language capacities, organizational strategies, and practice.

Individuals who struggle with written organization may have good ideas, but they have difficulty in getting started on writing assignments and may present information in a jumbled fashion. Children with learning and attentional difficulties frequently struggle with written organization.

## Spelling

Fortunately, spelling has become a less important skill in today's world. Individuals who are able to identify themselves as poor spellers have a number of tools such as spell check and auto-complete that can help them to manage this difficulty in their writing. However, learning to spell properly is a vital skill, and children who don't address spelling deficits early on will have a difficult time overcoming them later in life.
