

Websites and Resources for Kids on Video Games and Learning

Children spend much of their leisure time using technology and playing video games. While we strongly suggest that they balance this type of digital play with physical, creative, social, and unstructured play, there is much that they can learn from video game play.

These resources are useful for helping kids to make the connection between game-based learning and real world skills.

The way kids and teens learn today has changed drastically, so it is beneficial for kids to understand how video games can help them. Of course, some technologies are better than others, which is why we've put together a list of some of the best resources for kids. Take a look, and be sure to share the links with your kids! Check back frequently for more.

Websites

[Pixelkin](#): A fun website for both kids and parents who enjoy news, reviews, videos, and more about video games.
