

Videos on Multiple Intelligences

Often, it is most helpful to learn about something not by reading about it, but by watching a video about it. Multiple intelligences refers to a theory developed by Dr. Howard Gardner that describes the many forms of intelligence that help children to master their environment. Rather than defining “intelligence” as something that is measured on a test, Gardner describes 8 types of intelligences. These are musical, naturalistic, kinesthetic, spatial, interpersonal, intrapersonal, verbal, and logical/mathematical. Both for parents and kids, videos can be a great way to learn more about multiple intelligences. While there are definitely videos that are not worth watching, we have collected some of the best videos available on the Internet. Check out the excellent videos below, updated regularly by our team at South County Child and Family Consultants. Pay careful attention to which videos are designed for kids and which are designed for adults.

For Adults
