Resources on Exercise for Parents

Many kids who struggle with developing healthy exercise habits have a hard time more active activities trying or learning to incorporate both active and inactive activities into their day. However, there is substantial research that states that getting enough exercise only enhance physical can not development but also emotional

wellbeing. Learning more about healthy exercise habits can be beneficial for both parents and children.

Our team of neuropsychologists, school psychologists, and psychology students at South County Child and Family Consultants are committed to searching the Internet and beyond to find reputable, informative, and practical tools to help parents, children, and teens improve your child's exercise habits. We look for the best information online to help kids diagnosed with ADHD, Learning Disabilities, executivefunctioning difficulties, struggles with Social Emotional Learning (SEL) skills, autism, depression, and anxiety and provide you with information about how neuropsychological evaluations help in targeting concerns regarding your child's exercise habits, or lack thereof. Come back regularly, as the links are updated frequently.
