

Improving Executive Functions: Developing Time Management Skills

Time management skills are crucial for kids and adults who want to accomplish things. In our efforts in conducting neuropsychological evaluations of children and teens at South County Child and Family Consultants, we often find that underdeveloped time management skills are very common. One of our common recommendations is that parents and kids familiarize themselves with books to help improve time management skills in children and teens.

Children with well developed time management skills are able to get dressed and eat breakfast without being late for school. They are able to finish their school work and have enough time to play before going to bed on time.

Teens with time management skills are able to balance being involved in extracurriculars, finishing their homework, working a job, and having time with family and friends. Overall, improving time management is essential for study skills in school while maintaining time to develop a social life.

If a child or teen is struggling with time management skills, reading some of the following books will provide excellent guidance to start improving time management. With each book, there are chapter numbers to pinpoint where time management is talked about in the book. There is also an Amazon description next to each book to help narrow down the resources you need.

Books on Time Management:
